

ON TIME ANY SIZE

No matter what the size of your rotating equipment, Inpro/Seal will design a bearing isolator to fit your specific needs. Inpro/Seal Bearing Isolators range in size from 5/8ths to 58 inches. They install on virtually any shaft and are available in a split design to simplify installation.

As the original patent holder of the first bearing isolator, Inpro/Seal is recognized as the leader in the permanent bearing protection industry. Inpro/Seal's Bearing Isolators are the **most efficient** and **cost-effective** way to prevent premature bearing failure and resulting downtime, much more than lip seals or other labyrinth seals. With properly protected bearings, **your rotating equipment will last longer** while maintenance costs go down and equipment productivity goes up. That's why 8 out of 10 end-users choose Inpro/Seal for **permanent** bearing protection.

From the largest to the smallest types of rotating equipment, and everything in between, Inpro/Seal Company provides you with the very best in permanent bearing protection. For more information contact Inpro/Seal Company at **1.800.447.0524** or visit www.inpro-seal.com.
