

# ZERO MAINTENANCE

## POWDER SEAL TECHNOLOGY

Inpro/Seal Company, the patent holder of the original bearing isolator, has been providing companies with permanent bearing protection for over 30 years. We combined our extensive knowledge and experience of bearing protection and seals with the power of air to create a zero maintenance powder seal with no need for periodic rebuilds.

The Inpro/Seal Air Mizer - PS is a non-contacting compound labyrinth seal made from bearing bronze that uses a positive air purge to create a barrier for powders, liquids, and bulk solids. It's ideal for open rotating equipment such as conveyors, rotary valves, mixers, mills and clinker-grinders. It eliminates maintenance, downtime and lost product. The Inpro/Seal Air Mizer - PS is specifically designed to handle the extreme misalignments commonly found in mixing equipment and is available in split or solid designs.
